

Electronic Sensors, Inc.

PRESS RELEASE:

**ESI / Level Devil Model 9225 "Lil' Devil II"
4G cellular tank monitoring system
brings new features, long future.**

May 20, 2019
For immediate release:

Electronic Sensors, Inc. (ESI) -- manufacturers of the Level Devil® line of fluid-measuring systems -- has developed an advanced version of its popular *Lil' Devil™* tank level remote monitor.

The *Lil' Devil™* series works with vented tanks, and uses "bubbler" technology, pumping tiny amounts of air into a flexible sensing tube submerged in the tank, to detect the amount of pressure at the bottom of the tank. It combines pressure readings with user-supplied tank dimensions and fluid identification, to calculate fluid volume or height.

The unit transmits tank data and alerts (such as high/low alarms and sudden-change alerts), from its onboard cellular modem, to ESI's data Center -- which, in turn, relays the information to any computer or phone of the user's choice (up to 10 contacts), via direct data link, e-mail, text or automated voice, and/or posts the data to a password-protected private client web page on ESI's Level Devil website.

With cellular carriers planning to end 2G and 3G operations, the new Model 9225 *Lil' Devil II™* uses the advanced 4G/LTE Cat M1 cellular telecom network -- already covering the U.S., lasting far into the next decade.

The *Lil' Devil II™* expands the *Lil' Devil™*'s tank monitoring capacity from 4 tanks to 5, and adds a large onboard LCD digital display, showing tank number and amount in the tank (in user-selected units). The AC-powered unit also transmits an alert if AC power fails.

The *Lil' Devil™* system is popular for remote monitoring of non-volatile oils and lubricants, low-reactivity industrial chemicals, coatings, concrete additives, slurry, pulp mix, and water/wastewater. Additional Level Devil monitors and sensors are available for most fluids and tanks.

Electronic Sensors, Inc. (ESI) -- in business since 1983 -- produces the industry-shaping **Level Devil®** tank monitoring systems and services. ESI supports remote tank monitoring equipment, software and communications for fuels, oils and lubricants, industrial and agricultural chemicals, cryogenic liquids and gasses, oilfield tanks, water and wastewater -- with over 10,000 installations at sites across the U.S. and abroad.
